Methandrostenolone distinctly improves the general condition of patients. The protein-anabolic effect can be proven by a positive nitrogen balance and weight gain. With methandrostenolone the serum albumin concentration falls, while the alpha2 globulin rises. The blood sugar values of a double glucose load are uninfluenced. DESCRIPTORS: *Dianabol, Drugs, *Liver, *Toxicity, Blood proteins, *Cholesterol, Cells (Biology), Degeneration.

The effect of methandrostenolone (in daily doses of 10 mg. p. o) on the liver was examined in adults. There was found, biochemically, in some of the cases: increased concentration of SGOT, SGPT and serum cholesterol, increased BSP retention, traces of reduced albumin with unchanged total serum albumin, normal concentrations of bilirubin and alkaline phosphatase (Biological Sciences--Pharmacology, TT, v. 11, no. 3) (over)

There is no regular effect on basal metabolism. Methandrostenolone can reduce the steroid excretion in the urine. The anabolic effect on the bone matrix was proven by bone biopsies. No improvement in limited renal function can be found. (Author)

The effect of methandrostenolone (in daily doses of 10 mg. p. o) on the liver was examined in adults. There was found, biochemically, in some of the cases: increased concentration of SGOT, SGPT and serum cholesterol, increased BSP retention, traces of reduced albumin with unchanged total serum albumin, normal concentrations of bilirubin and alkaline phosphatase (Biological Sciences--Pharmacology, TT, v. 11, no. 3) (over)

in the serum. Liver biopsies histologically showed swelling of the perenchymal cells, granular degradation of their protoplasm and reduced acidophilia in the central protions and eosinophilia of the periphery, focal deposits of an iron-free pigment, especially in part by anabolic changes in the intermediate metabolism, partly by inhibition of excretory mechanisms of the liver cells. Maximum N excretion occurred during the 3rd to the 5th day. A high protein diet or methandrostenolone, an anabolic steroid, diminished the N loss from the body. After operation there is a temporary, statistically significant increase of NPN in serum, caused by BUN elevation. The concentration of these substances reaches its maximum on the 6th day; by the 12th day it is normal. From the 3rd to the 15th postoperative day, serum total protein was unchanged as compared with preoperative values. Albumin showed a constant decrease during this period, α-globulin a temporary increase. (Author)

THE DETERMINATION OF THE GREASE RESISTANCE OF PAPERS, PT. 1. [1961] 12p. (1 fig. omitted) 36 refs.
Order from SLA $1.60 62-10349

Trans. of das Papier (West Germany) 1961, v. 15, no. 6, p. 222-229.

DESCRIPTORS: *Paper, Greases, Resistance, Determination.

The article outlines observations made concerning grease resistance and greaseproof papers. The testing methods currently employed are described and critically examined by taking into consideration experimentally obtained results. In establishing a standard method for testing a paper consideration must be given to the purpose the paper must serve.
